

The BIC Consortium

is looking for

- researchers or SMEs with
- biomarker projects and
- technology transfer offices supporting such projects!

Your benefit?

- Benefit from the well structured knowledge on biomarker commercialization - from identification to market launch!
- Contribute to the establishment of a tool for biomarker commercialization!
- Draw attention to your biomarker project through participation in a European project!
- Benefit from the network of the project partners!

Your tasks?

- Summarize your biomarker research project, its goals and its level of maturity!
- Participate actively! (e.g. introduction workshops, spread in your institute/company)
- Implement it to your research/work!
- Give feedback to the tool! (questionnaire/interview)

Application deadline
extended until
10.06.2019

Apply now!

Deadline: 22.05.2019

BIG SUCCESS WITH BIC TOOLS

Who can apply?

The primary target groups of the tool are researchers, TTOs, but also established companies that are currently planning or have already begun commercialization. However, in order to validate the tools with regard to their content, the BIC consortium also need feedback from SMEs who have already successfully completed the commercialisation process.

All these target groups are encouraged to apply for participation and to contribute to the successful establishment of a biomarker commercialization tool.

How to apply?

The application is done by completing an application form and sending it by e-mail to the local contact points of the project. The application form and the local contacts can be found on the BIC homepage.

All information will be

treated confidentially.

The deadline for application is **22.05.2019**.

Final decisions based on selection criteria mentioned in the application form will be taken by the end of June.

Conditions

For pilot sites that have been selected as participants, the project will reimburse any costs incurred through the piloting (e.g. on-site workshops, travel expenses).

It is not possible to reimburse personnel costs for working hours incurred or to pay a corresponding expense allowance.

By participating, the participants declare that they are already actively involved in the evaluation process of the biomarker commercialization tool, in particular that they are available for interviews and an exchange of experiences.
